SEMEN ANALYSIS SPECIMEN COLLECTION INSTRUCTIONS

- Call our Patient Services Team at 877.324.4483 to schedule your appointment at any conveniently located Fertility Centers of Illinois clinic.
- Bring in this completed form, your photo I.D. and your insurance card for verification purposes. You will receive a consent form from our laboratory staff, to be completed at the time of your appointment.
- It is necessary that you refrain from sexual activity for three to five days before producing the specimen.
- The sperm specimen may be produced in the comfort of your home, by use of a collection kit, which can be picked up at any Fertility Centers of Illinois office (Monday - Friday between 7:00 am - 4:00 pm). If you prefer, the specimen can be produced at a Fertility Centers of Illinois facility, in one of our rooms designated for this purpose.
- Please wash and dry your hands thoroughly before producing the specimen. DO NOT use creams or lotions of any kind. We are not able to accept a specimen that was collected using a commercially-sold condom, or in any container other than a sterile specimen cup. A specimen cannot be accepted if it is in a leaking or non-sterile container.
- The specimen should be produced by masturbation directly into the labeled sterile container. Collection of the specimen by methods other than masturbation produce very poor results. It is important that the initial portion of the ejaculate goes into the container, as it contains almost all of the sperm. Collection of a complete specimen is important for most accurate results.
- When producing a specimen outside of an Fertility Centers of Illinois facility, an "Off-Site Collection" form is required, which is included in the collection kit. The specimen should be produced no more than TWO HOURS before the appointment time of a specimen drop-off.
- While being transported to our facility, the container should be kept at body temperature (e.g. carried in an inside pocket next to the body). Temperature fluctuations can damage sperm, thereby invalidating the results.
- After you have produced the specimen, close the lid tightly. You must complete the label provided for the container. Give the labeled specimen and your completed consent form directly to your laboratory staff member.
