

General Wound Care Instructions

- Cleanse the wound daily with mild soap and cool water.
- Apply Polysporin to the area 3X's per day. DO NOT LET CRUST.
- If possible, keep a bandage or gauze cover over the wound until it has healed.
- If you have sutures in place, do not allow the wound to soak in a pool, hot tub or bathtub. Brief exposure to water in a shower is acceptable.
- Avoid strenuous activity for 24 hours after procedure. Minimize activity which puts strain on the sutures.
- If you notice any signs of infection (fever, pus or redness spreading out from the wound) please call our office.
- Most patients have little or no discomfort. If needed Tylenol® is acceptable.
- There is always a possibility of scarring with any surgical site. If your scar becomes thick or begins to itch, please contact our office as it may require treatment.

***Please call the office at any time if you have questions or concerns. We are always available to help. If the office is closed you will be directed to the answering service to reach Dr. Yee.
