As a Healthcare provider, I continually review new medical technologies looking for those procedures that represent better medicine for my patients. I have recently evaluated a new device and found that using it in conjunction with a conventional visual oral examination enhances my ability to identify, evaluate and monitor oral mucosal abnormalities.

This painless, non-invasive visual test gives us a better chance to find any oral abnormalities you may have, at the earliest possible stage. This technology has successfully improved the identification of pre-cancerous abnormalities in thousands of exams of squamous epithelium of the cervix and has recently been cleared by the FDA for an oral application. Early detection of such abnormalities can result in the early treatment of pre-cancerous tissue.

This new device is called the ViziLite™ Test Kit and I am now offering it to all of my patients. The enclosed brochure will tell you more about ViziLite.

The ViziLite Test Kit is a new procedure and is not yet covered by insurance. For now, there is a fee of \$45 for this enhanced exam.

For our records, please indicate below whether or not you wish to have the ViziLite™ exam:

Yes please, I authorize my clinician to use the ViziLite™ Test Kit along with my conventional visual oral examination. I accept financial responsibility for this enhanced visual exam.
