

## Guest Blogger >> Joseph T. Mormino, D.D.S.

Dr. Joseph Mormino is known as one of the best implant, cosmetic, and family dentists in the New York area because of his dedication to providing a comfortable and pain-free dental experience to his patients. His practice offers a warm, welcoming environment, with an on-site dental lab. In his post-graduate training, he studied the full curriculum under Dr. Peter Dawson, one of the most prominent comprehensive dentists in the world. Dr. Mormino is a member of the American Academy of Cosmetic Dentistry (Staten Island's Only Sustaining Member), American Dental Association, Second District Dental Society, Greater Staten Island Study Club, International Congress of Oral Implantologists, and the Academy of General Dentistry. He was born and raised in Staten Island, and he is now celebrating the 25th anniversary of providing quality general and cosmetic dentistry to the Staten Island community.

## What Implant and Restorative Dentistry Can Do for You

### Considering Dental Implants

Do you worry about your smile? Every time you look in the mirror and flash a grin, do you immediately notice your dentures and think they don't look very natural? Or maybe you wish there was a way to replace a tooth that you have had a crown on for years. It never has looked natural to you, and you've always wished for an option to alter its appearance. Then you have probably been thinking for some time about changes you could make to improve your smile. Now, not only can you have beautiful teeth, but also they will look and feel natural with the help of dental implants. Dental implants provide patients with a safe and beautiful option to transforming a smile that is more durable, aesthetically pleasing, and able to stay in place while you eat.

### A Permanent, Beautiful Option

Replacing missing teeth does not need to stop with bridges or dentures. Dental implants are an option for individuals searching for a way to replace teeth with a safe and effective option. Dental implants are replacement tooth roots that provide a secure base for the abutment teeth in the jawbone. There are three main steps to the entire dental implant process: implant insertion, healing of the jawbone, and attachment of the new tooth or restoration.

Many patients worry about the durability of dental implants; however these implants are constructed to last many years. With proper care, regular visits to the dentist, and regular oral hygiene, dental implants can last a lifetime. In addition, dental implants allow patients to enjoy:

- **Improved smile appearance** - dental implants provide patients with beautiful aesthetics and look natural as well.
- **Better speech** - ill fitting dentures can slip and cause speech to be impaired. With dental implants, an individual no longer needs to worry about these issues.
- **Comfort** - dental implants are renowned for their comfort and durability. Patients report that they cannot tell the difference between a dental implant and their natural teeth. No nerve sensitivity or new decay to worry about.
- **Easier to eat** - with missing teeth or dentures, it can be difficult to eat with ease and confidence. Dental implants allow the worry to vanish, as no slippage will occur.
- **Confidence** - imagine not having to worry about the look or feel of your smile. With dental implants, all you have to think about is smiling—nothing else.

### Learn More about Dental Implants

To evaluate if dental implants are a good option for your tooth replacement needs, contact a dentist who is experienced in dental implants who will answer all of your questions and schedule you for a consultation. Dental implant technology has helped countless people start smiling more and worrying less.
