**REFRACTION FEE POLICY**

**What is a refraction?**

A refraction is the part of the eye examination in which the technician carefully measures you for any change in your eye glasses prescription.

In many instances, the doctor will need to have the technician measure you for your glasses in order to completely assess the **medical** condition of your eyes in order to properly care and treat your eye condition.

You have the option of declining this portion of the eye examination, but we will not be able to provide you with a glasses prescription.

This portion of the eye examination is **not covered** by Medicare and most other insurance policies.

Some *vision plans* require you to go to specific optometrists in order for you to be covered for the eye examination and your eye glasses. Since Byrd Eye Clinic does not sell glasses, many *vision plans* have declined our participation.

Our fee for this examination is \$25.00.

If you choose to have a new prescription for glasses, the \$25 fee will be assessed, and you are required to pay this at the time you receive the prescription from Dr. Byrd. You may take the prescription to the optometrist or optical shop of your choosing, unless your vision plan requires otherwise.

We at Byrd Eye Clinic strive to provide you with highest quality complete eye care. If you have any questions, please feel free to ask.

**Acknowledgment**

I have read the above information and understand that the refraction is a non-covered service. I accept full financial responsibility for the cost of this service. Any copay, deductible, co-insurance requirement are separate from, and not included in, the refraction fee.
