

Exceptional Experience • Flawless Technique • Rapid Recovery • Beautiful Results

24 Hour Breast Augmentation

Many people associate breast augmentations with long painful recoveries; requiring time off of work, out of the gym and off of life in general. Fortunately, for those who do their research and seek the expertise of a surgeon who uses the latest techniques in breast augmentation, a 24 hour recovery time is now a reality.

What is a 24 Hour Breast Augmentation

A rapid recovery breast augmentation not only produces beautiful results but it significantly reduces the discomfort and recovery time associated with a traditional breast augmentation. In order to provide a fast recovery, Dr. Robles and his staff use a state of the art surgical technique which ensures patients an exceptional experience, a rapid recovery and beautiful results.

What sets a 24 Hour Breast Augmentation Apart

No General Anesthesia

General anesthesia is used in traditional breast augmentations. The side effects of general anesthesia include postoperative nausea, vomiting and prolonged sedative effects; leaving the patient feeling uncomfortable and lethargic as they awake from surgery. With the 24 hour breast augmentation technique patients are given medication to ensure their comfort throughout the surgery and to allow them to awake immediately, without the side effects of general anesthesia.

Scaring and tissue damage can prolong the recovery process and negatively affect the end result of a breast augmentation.

With the 24 hour *Breast Augmentation* technique scaring and tissue damaged are minimized, providing superior quality results and faster recovery!

Exceptional Experience • Flawless Technique • Rapid Recovery • Beautiful Results

Precise Technique

Traditional breast augmentation surgery includes blunt trauma at the incision causing painful bruising and bleeding which prolong the patient's discomfort and recovery time. The 24 hour technique enables Dr. Robles to cause little to no bruising or bleeding, significantly reducing the patient's recovery time.

Physical Activity

Patients who are able to perform specific exercises and stretches following a breast augmentation report a substantially shorter recovery time. Because the 24 hour technique allows the patient to be awake and alert following the procedure, Dr. Robles is able to assist his patients in performing these exercises immediately; again contributing to a shortened recovery time.

The 24 hour breast augmentation technique is a state-of-the-art approach to breast enhancement. Why suffer through an extended recovery process and risk the quality of your results? Not only does Dr. Robles' technique enable him to shorten the recovery process, the long term results of his precise technique include less scarring and a more natural look.

This revolutionary technique enables Dr. Robles to provide each and every patient with an exceptional experience, a rapid recovery, and beautiful results. If you are considering breast augmentation surgery, contact Dr. Robles today. Schedule your consultation and learn how the 24 breast augmentation technique can help you achieve the results you are looking for, in a fraction of the time.
